

Job Description (Senior) Android Mobile Developer

We are looking for a (Senior) Android Mobile Developer, who is excited to be part of a growing Fintech Venture located in the heart of Europe/Vienna.

You will work closely with the Lead Architect and other engineers in developing our digital payment service and product offering being focused in this role on our mobile product offering around Android including relevant SDKs.

Your Daily Business:

- Development of white labelled mobile applications for Android
- SDK Toolkit development
- Active participation in architecture, design and review of the application, reusable and scalable software modules and their documentation
- Maintenance and adaptation of the existing applications to new requirements and standards
- Close cooperation with the entire team (cross- functional)

You should have the following skills/knowledge to be successful in this Role:

- Professional Experience in mobile application development for Android (Kotlin)
- Good Understanding of UI/UX design principles, patterns and best practices using Sketch, Figma or similar tools
- Working Experience in developing White labelled mobile Application and SDKs
- Knowledge of the design and implementation of web services (REST, SOAP)
- Experience with Scrum and development tools (Gitlab)
- Experience with data protocol (Bluetooth Low Energy) is a plus
- Hybrid App Technologies (Flutter, ReactNative) is a plus
- Very good Knowledge of English

What you can expect working with us:

- Flat hierarchies and short decision-making paths
- Choose your HW of choice (Mac, Windows)
- Room for further development
- Modern Office Environment in Vienna with good public accessibility
