

## Job Description DevOps Engineer

We are looking for experienced (Senior) DevOps Engineer, who is excited to bring in their knowledge to create and support their continuous integration, in order to ensure stable and reliable releases of our new generation payments platform in a newly formed Vienna Fintech venture.

Your roles & responsibilities:

- Ensure secure and stable operations.
- Build and maintain CI/CD pipelines facilitating frequent build, testing and deployment.
- Coach and assist teams to continuously improve development practices, a high degree of test coverage and maintainable and reusable components.
- Setup and maintain observability platform for our deployment.

You should have the following skills/knowledge to be successful in this role:

- Strong hands-on experience and skills on Docker, Kubernetes, infrastructure design (networking, load balancing, CDN, middleware including message queue - Kafka, RabbitMQ, etc).
- Working experience with CI/CD pipelines and tools (GitLab, Jenkins).
- Experienced in deploying, operating, monitoring, optimizing and troubleshooting infrastructure.
- Knowledge of Cloud and Hybrid-Cloud strategies using eg.: VMWare Tanzu.
- Experience with Linux and Shell-Scripting.
- Solid understanding of JVM platform.
- Work experience in payments/banking related field is a plus.
- Full professional proficiency in English.

What you can expect working with us:

- Working for a fintech with a global vision.
- Full remote possible with option to always come to our modern office environment in Vienna.
- Have an impact in changing how we pay.
- Working environment with a high degree of collaboration and autonomy.
- Choose your HW of choice (Mac, Windows).
- Involvement in defining products.
- Support for your personal development.
