

Job Description

Senior Software Engineer

We are looking for a Software Engineer, who is excited to be part of a growing Fintech Venture located in the heart of Europe - Vienna.

You will work closely with the Lead Architect/Engineer in developing our digital payment service focusing on financial inclusion. We have DevOps culture; we do pair programming and code reviews to facilitate peer-learning to avoid knowledge silos in the team.

We are currently working on:

- Design and implementation of new (micro) services and APIs for our mobile apps as well as for 3rd party integration. We follow principles of Reactive Systems, and we use Kotlin with Quarkus (Reactive) for implementation of new services.
- Creating foundational layer in our infrastructure to be able to deploy to any cloud provider as our customers wish.
- Developing features such as offline payments, e-commerce, digital receipts and NFC payments.

A great senior software engineer should have:

- Experience as software engineer on technically challenging projects.
- Strong intuition for problem solving and process improvement.
- Ability to clearly and concisely communicate your thought process.
- Deep understanding of approaches to testing.
- Very good knowledge of English.

In addition, it would be great if you have experience with:

- Java or Kotlin.
- Docker and Kubernetes.
- Relational databases (Postgres) and event streaming platforms (Kafka).
- Security Concepts
- Experience with any cloud provider.
- Business knowledge of the payment industry.

What you can expect working with us:

- Flat hierarchies and short decision-making paths.
- HW of choice (Mac, Windows).
- Dedicated time for learning and development.
- Remote (to almost 100%) with the possibility to come to our modern office environment in Vienna.
